

CPR key ring, infection protection, life key

This key ring gives you the safety to be able to help when it is needed.

Small, handy and always with you.
Help yourself and others.

Out of the pouch you'll find this plastic membrane with a one way valve for giving the mouth to mouth reanimation to a non breathing person. The sides are marked.

"OPERATOR SIDE" is the side for the rescuer and "TOP" points toward the nose of the patient.

The barrier avoids direct contact between you (the first responder) and the patient and therefor avoids the risk of disease transmission. Further it helps you not to hesitate giving the urgently necessary help.

The use is this simple::

- 1) Unpacking,
- 2) Apply mask on the patients face,
- 3) the rubber bands hold the mask in place during the reanimation.

Combined with effective chest compressions you are giving the life saving Cardio Pulmonary Resuscitation (CPR).

First aid saves lifes. Get trained.

This key ring you can also have personally branded.

Further information about our products and services and about the branded key ring you'll find here.

Untill August 20th we have a special offer for orders of 100 key rings or more. Please contact us.
